Know the Risks: Asthma and Tobacco

Students with asthma experimenting with or using tobacco products may experience:
- worsening lung function
- increased asthma symptoms
- poor asthma control
- trips to the hospital or emergency room
- missed school days

Although cigarette use is declining, e-cigarette use is at epidemic levels.1

Approximately 40% of students believe there was low or no risk of negative health effects from e-cigarette use.2

Illinois Middle and High School Student Tobacco Use Profile3

12.9% have current asthma.

22.3% of those with asthma had an asthma attack in the past year.

18.5% of students have used any tobacco product in the past month.

12.2% used any combustible product.

13.6% used e-cigarettes.

12.7% of those with asthma had an asthma attack in the past year.

More students with asthma using tobacco are having asthma attacks compared to students without asthma.4

More students with asthma are using tobacco products compared to students without asthma.4

Not using any kind of tobacco protects students with asthma from having an asthma attack.5

What to do?

Talk to students with asthma
- Provide education on triggers, e-cigarettes, and harms from tobacco product use.
- Promote smoking cessation resources to students and their families.

Support policies which reduce youth access to tobacco products.
