

Illinois Trauma Registry
Corporate Report Release Notes
Issue Date March 12, 2007

REPORT NAME: HEAD INJURY

Report Purpose—

The report displays head injury counts for all Nature of Injury codes (N-codes) listed in the *Report Content* section, below, as delimited by user-defined selection criteria, such as date range and patient type.

Report Layout—

The report consists of four tables laid out in a column-row grid format. The first table displays counts for closed-vault skull fracture head injuries, the second for open-vault skull fracture head injuries, the third for closed non-skull-fracture head injuries, and the fourth for open non-skull-fracture head injuries. The following samples show the report layout for the four tables, including the column and row headings. For example, in the first table, the upper leftmost cell will count 800.00, 801.00, 803.00, and 804.00 N-codes, the cell immediately below it will count 800.01, 801.01, 803.01, and 804.01 N-codes, and so on. A complete list of all N-codes by table is provided in the *Report Content* section.

Table 1: Skull Fracture, Closed (800/801/803/804)

This report counts the occurrence of a wide range of head injury designations, not the number of patients with a head injury. If entries have been made for more than one type of head injury for the same patient, then that patient will be counted more than once on the report.
