WHAT YOU NEED TO KNOW ABOUT MONKEYPOX

Monkeypox is rare and does not spread easily between people typically without close contact.

WHAT IS MONKEYPOX?
Monkeypox is a viral infection transmitted through close, personal contact, including kissing, sex, and other skin-to-skin or face-to-face contact. Fatality during the current outbreak is estimated to be very low.

WHAT ARE THE SYMPTOMS

**RASH, BUMPS, OR BLISTERS**
These may appear anywhere on the body, including the genitals. This may look similar to syphilis, herpes, or other common skin rashes.

**KEY SYMPTOM**

**OTHER SYMPTOMS**
- Fever & Headaches
- Muscle Aches
- Swollen Lymph Nodes

Symptom onset ranges from 5-21 days

WHAT CAN YOU DO?

**STAY INFORMED**
Remain Calm. This is a rapidly changing situation. Visit the CDC Website for up-to-date guidance.

**CONTACT**
If you have symptoms, call (do not visit) your health care provider, and ask about testing.

**ISOLATE**
If you have symptoms, stay at home, wear a mask, and cover lesions to protect others.

ANYONE CAN GET MONKEYPOX
The data current show transmission is higher among people in close sexual networks. However, anyone in close contact like skin-to-skin or face-to-face to cases may get the infection. **Reduce your risk, stay safe, and be healthy.**
