

She thinks
“Measles”
live in shells.

**Childhood vaccinations
keep it that way**

Measles isn't a sea creature, it's a very contagious virus that can cause pneumonia (infection of the lungs) and encephalitis (swelling of the brain). Childhood vaccinations continue to help protect kids from measles. Let's keep it that way.

**Talk to your child's
healthcare provider
about keeping up to
date with childhood
vaccinations.**
