2019 data was used for the diagnosed no later than 3 months and lost to diagnostic follow-up measures. EHDl data can take one year to normalize due to scheduling and receipt time of reports. This data has been submitted to the CDC and is considered complete. If you would like updated individual hospital rates for these measures, please contact us.

Perinatal networks as a whole and individual hospitals that are out of compliance for certain measures should contact IDPH for remediation plans. There are remediation plans for each measure. A multitude of procedures and protocols impact each measure. Therefore, procedures and protocols will be analyzed to determine if best practices are being followed. We look forward to working together to improve our state performance.

These performance measures are to add transparency to our newborn hearing screening program across the state. The bullet charts on the left show our colored baselines and your network's performance compared to the state average. The hospital breakdown in the highlight table on the right shows what figures make up your perinatal network gray bar in the chart.
